

WEBSITE REVAMP SETUP OPTIMIZATION

Website Revamp + Complete Setup Optimization

I led a full revamp of the client’s WordPress site, transitioning from a cluttered, outdated setup to a clean, responsive design that reflects their brand. Using Elementor and WPBakery, I customized layouts and created mobile-friendly sections, while ensuring the structure followed SEO best practices.

On the backend, I upgraded WordPress core, plugins, and themes, then strengthened security using Wordfence, iThemes Security, and Sucuri for real-time protection, 2FA login, and malware scanning. I also set up automated backups and a recovery plan via cPanel and phpMyAdmin, with secure access managed through FTP/SFTP.

To boost performance, I implemented WP Rocket for caching, lazy loading, and file minification; Smush for image optimization; and Autopimize for script handling. All changes were version-controlled using Git and Bitbucket, ensuring clean and maintainable development.

About Us

At Hybix Agency, you will come across the team of certified programmers, UX/UI designers, digital marketing specialists and branding experts.

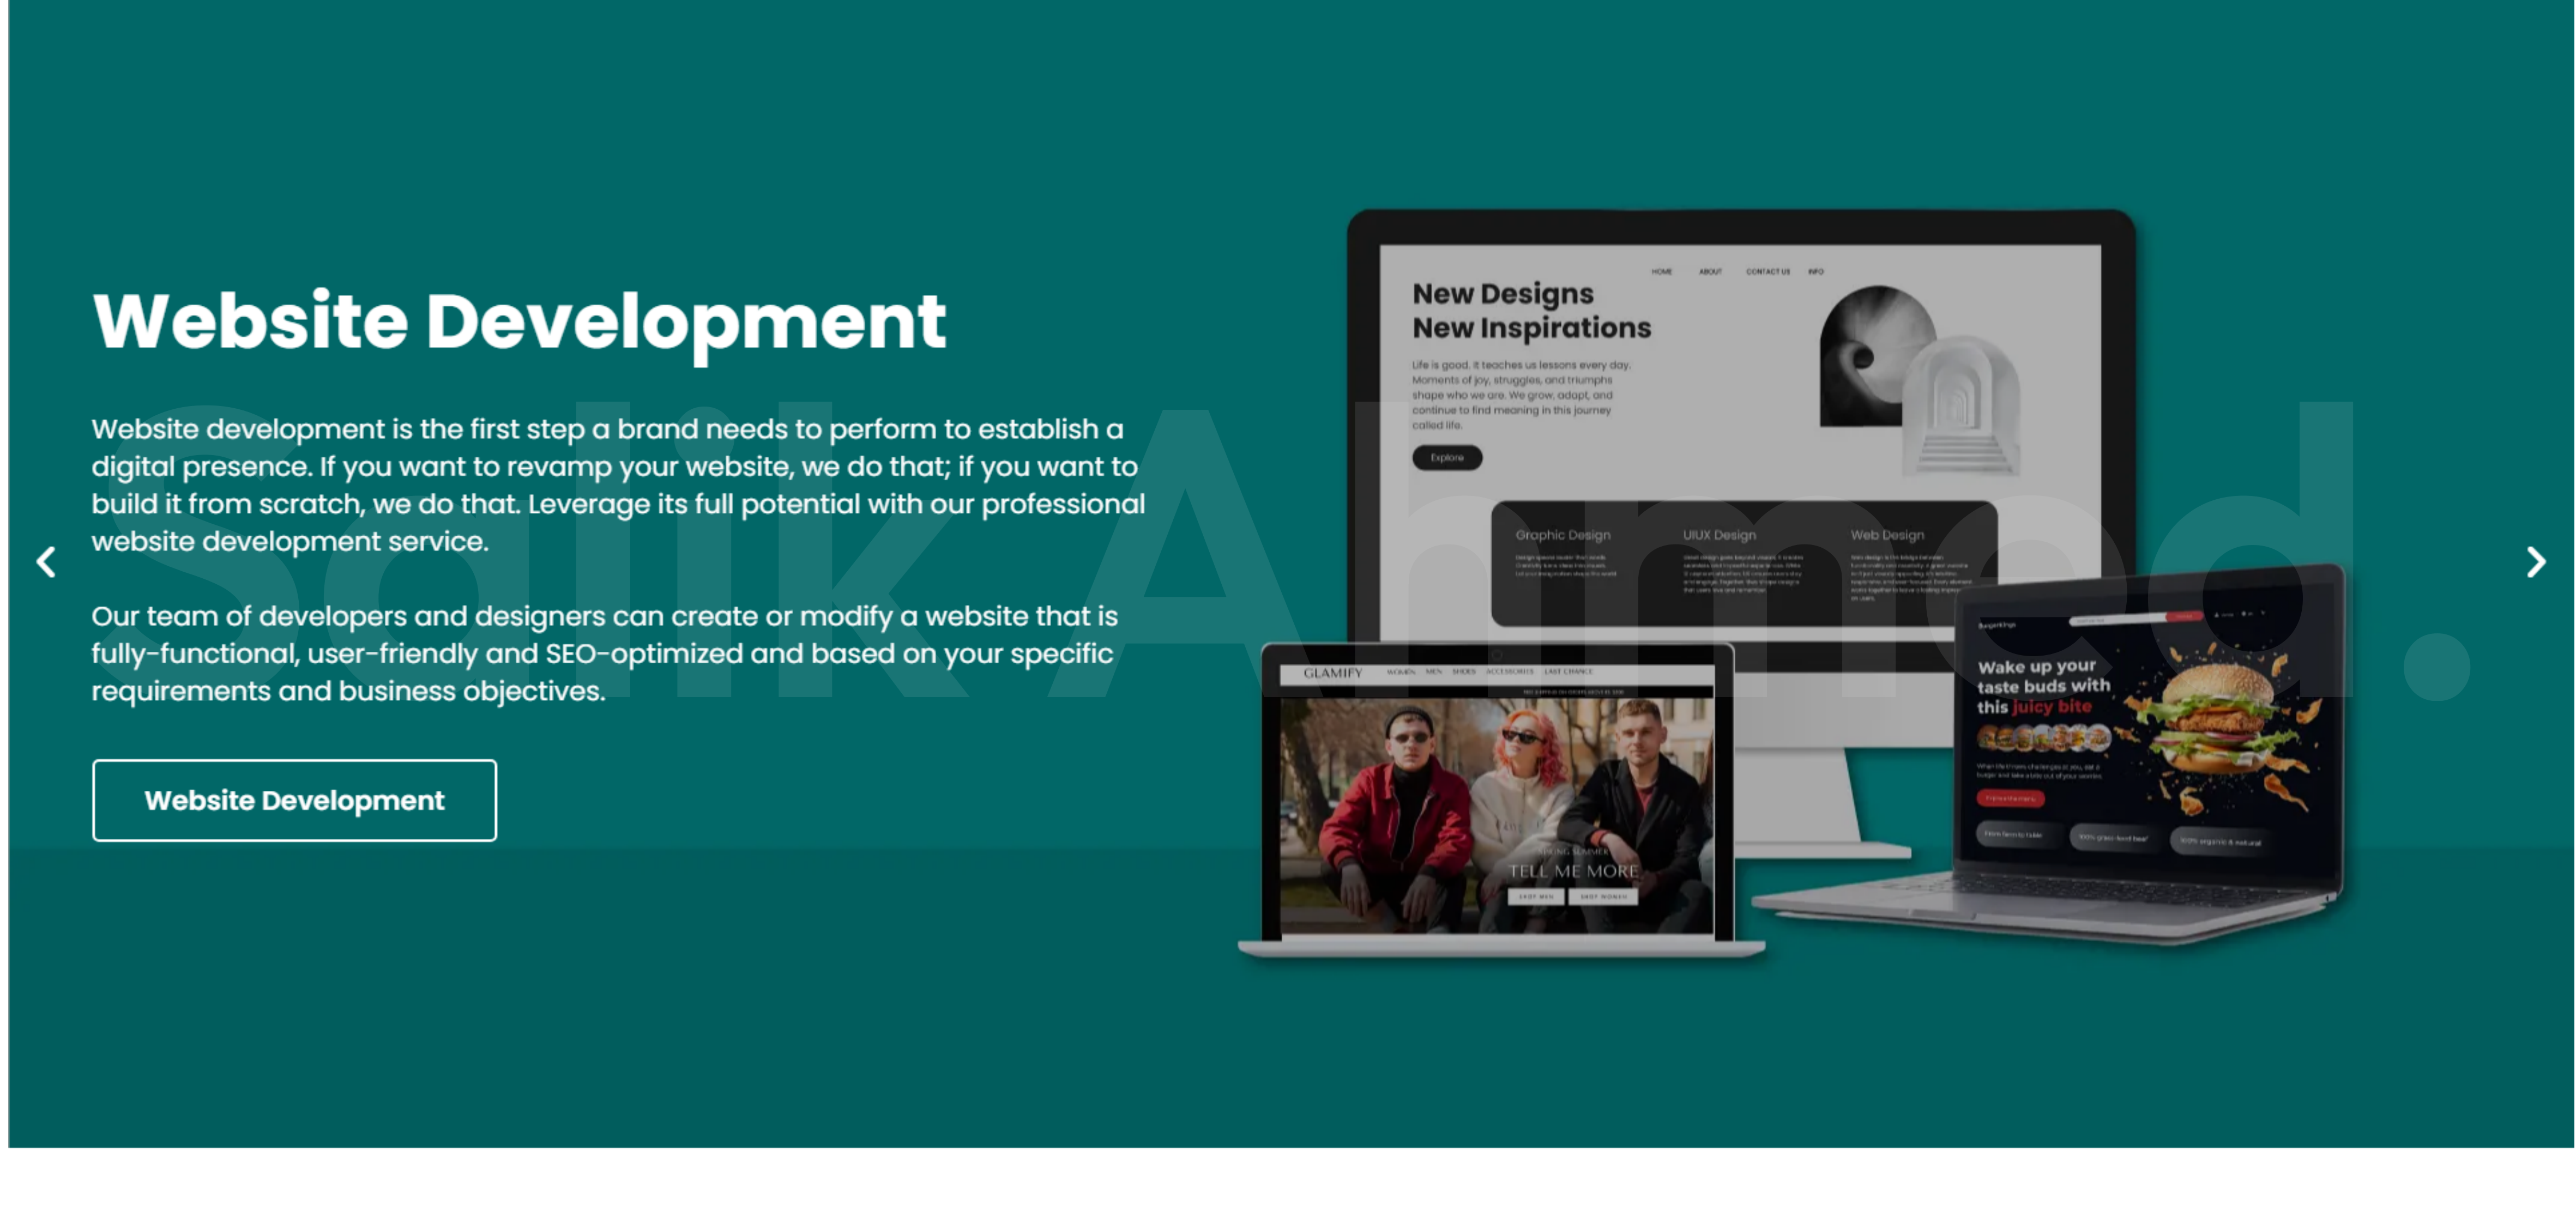

Since our establishment, we have helped hundreds of ecommerce startups and small and medium businesses. We develop, design, launch, and market their digital products.

From app, website, or any software development to performing SEO, PPC, social media marketing, and digital branding for our clients.
